

```
import java.util.Scanner;
class AreaOfTriangle
{

    public static void main(String args[])
    {

        Scanner s = new Scanner(System.in);

        System.out.println("insira a largura do triangulo");
        double b = s.nextDouble();

        System.out.println("insira a altura do triangulo");
        double h = s.nextDouble();

        double area = (b*h)/2;
        System.out.println("a area dp triangulo é" + area);
    }
}
```
